Could your business survive
a week-long tech outage?

Let's say your core systems vanish for a week.

- **X** **No emails**
- **X** **No files**
- **X** **No customer data**

(It's more common than you think.)

Day 1: Email goes down.

No incoming messages. No replies going out.

No one's quite sure what's happening... or who's chasing what.

Could your team keep things moving?

Day 2: You lose access to all your files.

Proposals, quotes, contracts, project work... all gone.

Your team's momentum? Gone too.

Now what?

Day 3:

Your customer records disappear.

No contact info.

No order history.

No way to follow up, help, or even invoice.

That's when the panic sets in.

By Day 4:
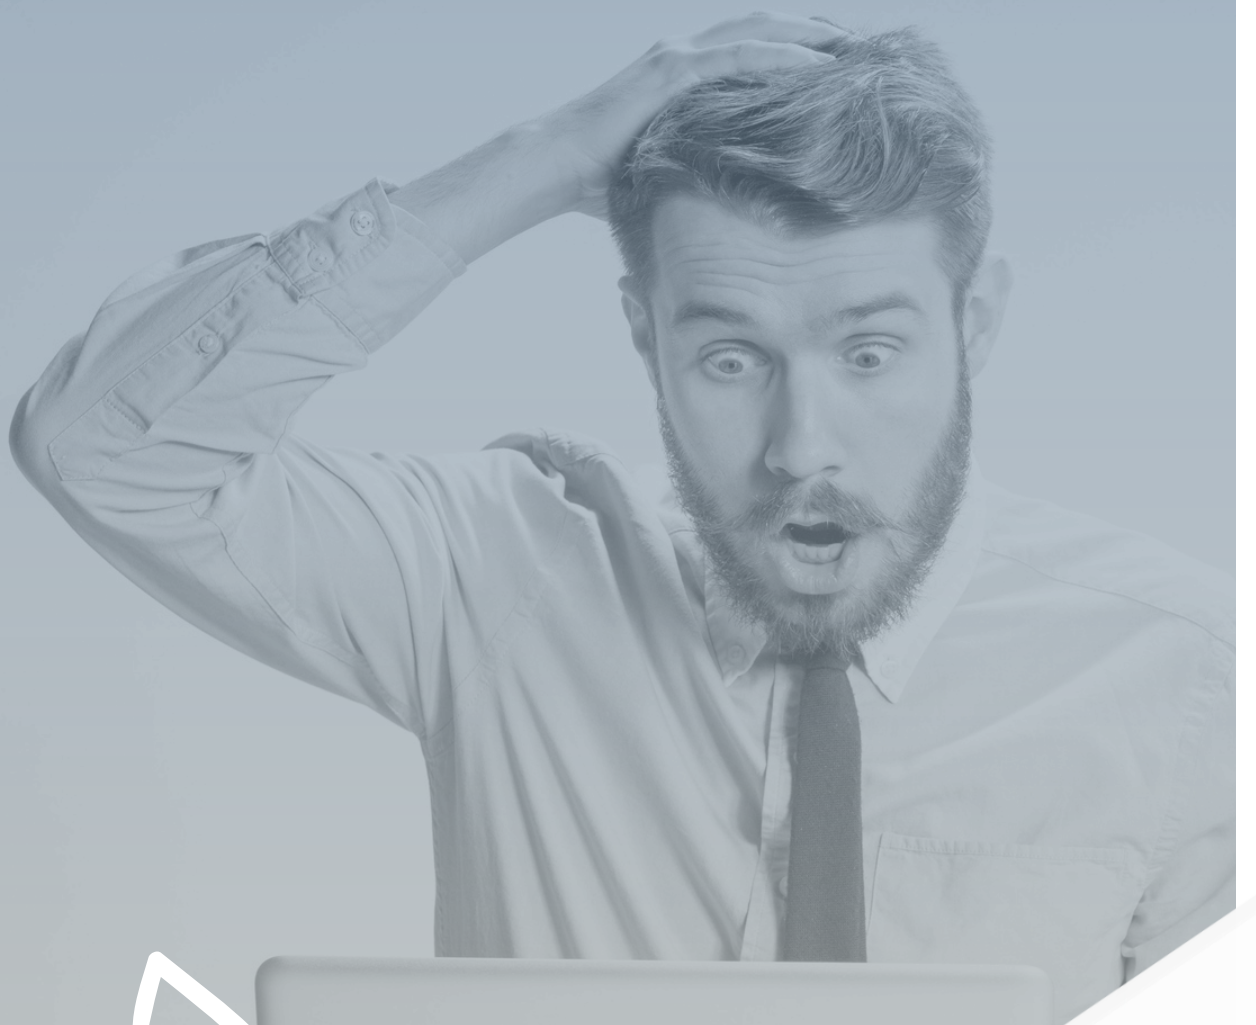

Deadlines are missed.

Clients are angry.

You've lost hours of productivity, and trust.

And there's still no clear recovery plan.

Most businesses don't realize how dependent they are on their systems...

# ...until it's too late.

Yes, you need backups.

But it's also about:

☑ **Planning**

☑ **Testing**

☑ **Knowing what to do when disaster strikes**

If your systems went down today, what's your Plan B?

## How fast could you bounce back?

Who's responsible for recovery?

No one likes to imagine the worst.

But the businesses that prepare, survive.

Let's pressure-test your setup.

We can help you spot the weak links before they become a real crisis.

Could your
business survive
a week without its
systems?

**Let's find out.
